Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
   int rev = 0, remainder;
   while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;

    }
print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```c
#include <stdio.h>
int main(){
    int n,r=0,re;
    int c=3;
    scanf("%d",&n);
    while(n!=0){
        c+=4;
        re=n%10;
        r=r*10+re;
        n/=10;
    }
    printf("%d",c);
}
```
